

File Import Tool for NetSuite

Availent System's File Import Tool for NetSuite provides a fully automated process to import Excel, CSV, or any ASCII format file directly into NetSuite.

Key Features

- No need to convert Excel files to CSV for Import. The tool can read Excel files directly.
- Import most NetSuite record data, including transactions even if there is no CSV import available for that transaction in NetSuite.
- Stakeholders simply email an import file to a unique email address or non-API apps send file to FTP server and our tool does the rest, importing the data immediately and seamlessly.
- To automate CSV imports, simply create a saved CSV import in NetSuite and an associated File Import.
- You can use custom scripting to perform any complex import or processing of files.
- The File Import Tool is installed and functions directly in your NetSuite account.
- Subscription service includes all ongoing support and covers unlimited number of unique file imports.
